The Criminal Justice Statistics Center (CJSC) is proud to present the $50^{\text {th }}$ edition of "Crime in California." Since its inception in 1953, many changes have affected the state of California, its people, and the criminal justice system. Through it all, CJSC staff have worked diligently to provide a valuable source of consistent and reliable criminal justice information. Any change, no matter how large or small, was made with an eye on the integrity of the data.

The 1952 report states, "It is hoped that this report is the first of a series of annual reports .... Reception of this report will very largely govern the publication and content of projected future issues, which, as time goes on, can serve to indicate trends and variations in crime and in the administration of criminal justice in California."

That statement is as true today as it was 50 years ago. Several items of historical interest, relevant to the evolution of this publication, have been added for this commemorative issue. Passages from the past initiate each chapter, while a listing of all CJSC employees and a timeline of publication events can be found in the Appendix.

What was started 50 years ago continues today with the same professional spirit, commitment, and dedication.

The overall crime rate in California increased 2.4 percent in 2002. Despite the increase, it does represent a reduction from the 3.7 percent increase seen in 2001. Crime rates remain at relatively low levels when compared to the high rates experienced throughout the 1970's and 1980's. The overall violent crime rate declined for the tenth consecutive year, hitting its lowest level in nearly 30 years.

The rate for violent crime offenses decreased by 2.7 percent from 2001 to 2002.

- Homicide ( 1.2 percent of violent crimes) increased by 7.9 percent.
- Forcible rape ( 4.9 percent of violent crimes) increased by 1.4 percent.
- Robbery ( 31.2 percent of violent crimes) increased by 0.8 percent.
- Aggravated assault ( 62.8 percent of violent crime) decreased by 4.8 percent.

The rate for property crime offenses increased by 4.9 percent from 2001 to 2002.
■ Burglary ( 51.7 percent of property crimes) increased by 1.7 percent.
■ Motor vehicle theft ( 48.3 percent of property crimes) increased by 8.6 percent.
Notwithstanding the current economic climate, we must ensure that law enforcement has all the necessary resources available, including access to all the latest scientific technologies - particularly those involving DNA evidence - to prevent the alarming crime rates of the past from returning. I will continue to lead serious and extensive discussions involving various law enforcement experts and criminal justice researchers on developing policies and laws that implement the most efficient crime-fighting policies available. Our emphasis must not only be on apprehension and prosecution, but must also focus on the most effective strategies for preventing crimes.

BILLLOCKYER
Attorney General

# "California: 

a place of many dreams, but one shared vision; a people of many faces, but one family."

BillLockyer
Inaugural Address
January 6, 2003

Although many social phenomena play a role in determining whether crime rates go up or down during a given time period, there is no question that the diligent work of the entire law enforcement community, along with community-based organizations, community leaders and parents, play a significant role in maintaining California's relatively low crime rates.

Through these efforts, we will continue to develop, promote and implement policies that have proven to be effective in combating crime. We as Californians, already privileged to live in our nation's richest and most diverse state, deserve the safest environment possible to enjoy everything it has to offer.

## CRIMES <br> (See pages 2-23.)

- The California Crime Index (CCI) rate increased from 898.1 in 1952 to its peak of 3,922.1 in 1980. The CCI has since dropped to 1,890.1 crimes reported per 100,000 population in 2002. (Source: Table 1.)
- The CCI rate increased for the third consecutive year. The rate increase was seen in all six major offenses except aggravated assault, which decreased. (Source: Table 1.)
- The violent crime rate declined and reached its lowest level since 1974. (Source: Table 1.)
- In 2002, homicides increased in rate and number for the third consecutive year. (Source: Table 1.)

## ARRESTS (See pages 26-63.)

- The 2002 total arrest rate of 5,223.8 per 100,000 population at risk reached the lowest level for which data are available. (Source: Table 16.)
- From 2001 to 2002, there was a slight increase of 1.0 percent in the felony arrest rate, which corresponds to the slight increase of 2.4 percent in the crime rate.
(Source: Tables 2 and 17.)
- Since 1997, the rate of juvenile felony arrests decreased 35.0 percent and the rate of juvenile misdemeanor arrests decreased 24.8 percent. The rate of status offense arrests (truancy, incorrigibility, running away, and curfew violations) decreased 21.4 percent since 1997. (Source: Table 17.)
- From 1997 to 2002, the homicide arrest rate decreased 20.9 percent. The rate of juvenile arrests for homicide offenses decreased 46.7 percent since 1997.
(Source: Table 22.)
- Since 1997, the narcotic arrest rate dropped 26.2 percent and the dangerous drug arrest rate decreased 12.6 percent. (Source: Table 22.)

DISPOSITIONS

■ In 2002, 67.4 percent of adult felony arrests resulted in a conviction. (Source: Table 39.)

- Probation with jail continues to be the most frequent sentence given for adult felony arrests. (Source: Table 40.)

## WHAT IS A CRIME?

A crime is an act specifically prohibited by law, or failure to perform an act specifically required by law, for which punishment is prescribed (15 P.C.).

## HOW ARE CRIMES COUNTED?

The Uniform Crime Reporting (UCR) Program was inaugurated in 1930 and is administered on the national level by the Federal Bureau of Investigation (FBI). It provides criminal statistics for use in law enforcement administration, operation, and management. In California, this program is administered by the Department of Justice (DOJ).

As part of the UCR Program, law enforcement agencies throughout the state report summary information to the DOJ on "selected" crimes. Reported crimes are classified by UCR definitions designed to eliminate differences among the various states' penal code definitions of crimes.

The crimes, selected because of seriousness, frequency of occurrence, and the likelihood of being reported to the police, are homicide, forcible rape, robbery, aggravated assault, burglary, larceny-theft, motor vehicle theft, and arson. These eight offenses are known as Part I crimes. Except for larceny-theft, UCR does not count misdemeanors and infractions.

The California Crime Index (CCI) comprises homicide, forcible rape, robbery, aggravated assault, burglary, and motor vehicle theft. When a 1983 California law raised the lower limit of felony theft from $\$ 200$ to over $\$ 400$, the DOJ dropped theft ( $\$ 200$ and over) from its measure of crime. Law enforcement agencies began submitting arson crime data in 1979; 1980 was the first year of complete reporting. To maintain long-term felony trend data in the CCI, the DOJ excluded larceny-theft and arson. As indicated in the box on page 3, we are considering inclusion of theft over $\$ 400$ and arson.

The UCR Program accounts for Part I crimes only; however, some Part I crimes go undetected and therefore unreported. This, along with the hierarchy rule, accounts for a certain amount of underreporting in the system. Most crimes occur singly as opposed to more than one crime being committed within the same incident. The hierarchy rule assigns a value to each crime and requires that only the single most serious offense be reported. For example, if a person were to enter a bar, rob eight patrons, and kill the bartender, only the homicide would be reported. Arson is the exception. Since arson frequently occurs in conjunction with other crimes, it is felt that valuable information could be lost using the hierarchy rule. Therefore, arson is counted along with the other most serious offense.

## WHAT IS A RATE?

A rate describes the number of events that occur within a given population. Crime rates and clearance rates are used in this section. Formulas for calculating both can be found in the Appendix.

## WHAT IS THE VALUE OF THE UCR PROGRAM?

Since its inception in 1930, UCR has become a nationwide program. All California law enforcement agencies participate. Quality control surveys conducted by the DOJ staff have shown a high level of compliance with UCR reporting standards. The number of participants and the amount and quality of data collected under the stringent rules of the system make UCR a valuable program. In California, because of the high quality of its law enforcement agencies and their close cooperation with the DOJ, UCR data are, and have been for many years, an extremely good indicator of the extent of, and fluctuation in, crimes reported to law enforcement.

CALIFORNIA CRIME INDEX, 1952-2002
By Category
Rate per 100,000 Population

Source: Table 1.

Data depicting crime in California have been published continuously for 50 years. The first Crime in California publication was issued in 1953 and reported data for the 1952 calendaryear.

## Comparing 1952 to 2002:

■ The California Crime Index (CCI) rate increased 110.5 percent (from 898.1 to 1,890.1).

■ The violent crime rate increased 284.8 percent (from 153.1 to 589.2).

- The property crime rate increased 74.6 percent (from 745.0 to 1,300.9).

The CCI rate increased almost continuously from 1952 through its peak year of 1980. Since then, the rate was in a general decline through 1999. In 1999, the CCI rate dropped to a 34 -year low of $1,763.3$ per 100,000 population. The 2002 rate of $1,890.1$ marked the third consecutive annual increase since the 1999 low.

The violent crime rate reached its highest level in 1992 (1,103.9). In 1952, reported violent crime accounted for 17.0 percent of the CCI. In 2002, reported violent crime accounted for 31.2 percent.

The property crime rate, like the CCI, peaked in 1980. In 1952, reported property crime accounted for 83.0 percent of the CCI. In 2002, reported property crime accounted for 68.8 percent.

Since 1952, there have been changes in laws and data collection procedures. For instance, in 1986 legislation was enacted which required reporting domestic violence as criminal conduct. As a result, the aggravated assault rate increased over 35 percent in one year. These types of changes should be considered when comparing data.

## Forcible Rape

Forcible Rape - The carnal knowledge of a female forcibly and against her will. Assaults or attempts to commit rape by force or threat of force are included.

The UCR definition of forcible rape states that only females can be victims; therefore, a forcible rape crime rate based exclusively on the female population is included. The following discussion is based on the rate of occurrence for both female population and total population (see Tables 2 and 5).

## Comparing 1997 to 2002:

- The rate of reported forcible rapes (female population) decreased 3.7 percent.
- The rate of reported forcible rapes (total population) decreased 6.8 percent.

From 2001 to 2002:

> In 2002, the forcible rape rate for females and for the total population increased 1.4 percent.

- Firearms were involved in 65.5 percent $(23,444)$.
- Knives or cutting instruments were involved in 18.4 percent $(6,599)$.

■ Other dangerous weapons were involved in 16.1 percent $(5,769)$.

In 2002, over half of all robberies involved the use of a weapon. Over six out of ten times that weapon was a firearm.

## Aggravated Assault

Aggravated Assault - The unlawful attack or attempted attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury. This type of assault is usually accompanied by the use of a weapon or by means likely to produce death or great bodily harm.

## Value of Stolen and Recovered Property

As part of the UCR Program, law enforcement agencies submit monthly reports showing the estimated dollar value of property stolen and property recovered. In these reports, the type of property is categorized in a uniform manner. However, agencies do not report these data consistently and frequently vary in their methods of estimating the dollar value of stolen property. Furthermore, property stolen and property recovered in any given time period are not necessarily the same property. For these reasons, dollar values of such property must be viewed as rough estimates.

From 2001 to 2002:

- There was a 9.4 percent increase in the dollar value of all stolen property.
- There was an 8.1 percent increase in the dollar value of motor vehicles stolen.
- There was a 10.7 percent increase in the dollar value of all other stolen property.

In 2002, of the total dollar value $(\$ 2,489,135,000)$ of all property reported stolen:

- Motor vehicles accounted for $\$ 1,241,829,000$ (49.9 percent).
- All other property accounted for $\$ 1,247,306,000$ (50.1 percent).

## CRIMES

## Clearances

Crimes can be cleared by arrests or "exceptional means." An offense is cleared or "solved" for crime reporting purposes when at least one person is arrested, charged with the commission of the crime, and turned over to the court for prosecution or referred to juvenile authorities. In certain situations a clearance may be counted by "exceptional means" when the police definitely know the identity of the offender, have enough information to support an arrest, and know the location of the offender but for some reason cannot take the offender into custody.

A clearance rate is the percentage obtained when the number of clearances reported are divided by the number of crimes reported.

## Comparing 1997 to 2002:

- The clearance rate for California Crime Index offenses decreased from 24.1 to 22.0 percent.
- The violent crime clearance rate decreased from 50.1 to 46.1 percent.

## ARRESTS

## WHAT IS AN ARREST?

Arrests occur when persons are taken into custody because they are believed to have violated the law. Not all arrests result in persons being placed in jail. Arrestees may be released by the arresting agency, may post bail, or may be released on their own recognizance to appear in court at a later date. Some are issued citations, much like traffic tickets, which direct them to appear in court.

Arrests are divided into two major groups: felony arrests and misdemeanor arrests. An arrest for a felony-level offense can result in a sentence to state prison if the offender is convicted as an adult. An arrest for a misdemeanor-level offense can result in a sentence of up to one year in a county jail, a fine, probation, restitution, or any combination of the four.

Juveniles may also be arrested for truancy, incorrigibility, running away, and curfew violations. These are commonly referred to as status offenses because agency intervention is based solely on the juvenile's status as a minor. Status offenses are acts that would not be "crimes" if committed by adults.

## HOW ARE ARRESTS REPORTED?

Unlike crimes, which are classified by nationwide Uniform Crime Reporting (UCR) standards, arrests are reported by

California statute definition of the offense. This may cause some differences in the definitions of certain crimes and the reporting of the arrests for those crimes. For instance, theft from a locked automobile is a burglary by California Penal Code definition. The crime would be classified and reported as a theft under the UCR definition. The arrest offenses in this section are defined by California statute for which specific code sections are listed in the Appendix.

All California law enforcement agencies report arrest and citation information to the Department of Justice on the "Monthly Arrest and Citation Register," which lists each arrestee; includes information on age, gender, and race/ ethnic group; and specifies the "most serious" arrest offense and law enforcement disposition.

## WHAT IS AN ARREST RATE?

An arrest rate describes the number of arrests made by law enforcement agencies per 100,000 total population or per 100,000 population considered to be at risk for arrest. The following section includes three at-risk comparison populations: total (10-69 years of age), adult (18-69 years of age), and juvenile (10-17 years of age). The formula used to calculate at-risk rates can be found in the Appendix.

- Arrests of blacks accounted for 17.2 percent $(238,961)$.
- Arrests of persons of other race/ethnic groups accounted for 5.9 percent $(82,286)$.

The subjectivity of the classification and labeling process must be considered in the analysis of race/ethnic group data. As commonly used, race refers to large populations which share certain similar physical characteristics such as skin color. Because these physical characteristics can vary greatly within groups as well as between groups, determination of race is frequently, by necessity, subjective. Ethnicity refers to cultural heritage and can cross racial lines. For example, the ethnic designation "Hispanic" includes persons of any race. Most commonly, selfidentification of race/ethnicity is used in the classification and labeling process.
Beginning with the Crime and Delinquency in California, 1991 publication, race/ethnic group designations used for data display purposes are the same as California Department of Finance, Demographic Research Unit, designations.

"This issue of Crime in California, which is the ninth in the series, is made possible by the willingness of the law enforcement and prosecuting agencies in the counties and cities of the State to consistently contribute individual and summarized statistical reports to the Bureau of Criminal Statistics... As Attorney General, with statewide responsibility, both statutory and moral, in the field of law enforcement, I wish to express my deep appreciation for the atmosphere of cooperation which extends its beneficial effects not only in the area of statistics but throughout the whole field of law enforcement, delinquency control, and criminal justice."

## DISPOSITIONS

The Offender-Based Transaction Statistics (OBTS) system in California describes the processing of adults arrested for felony offenses from arrest through final disposition. Data on the adjacent flow chart pertain specifically to adult felony arrests that received final dispositions in 2002 and were added to the Automated Criminal History System (ACHS) by the Department of Justice by May 2003.

## WHAT IS A FINAL DISPOSITION?

In the OBTS system, the term "final disposition" refers to a specific legal action that takes place following an adult felony arrest. Final dispositions shown occur at the law enforcement, prosecutor, or court level. For example, if an arrestee is released by a law enforcement agency or the complaint is denied by a prosecutor who has determined that there is not enough evidence to justify the filing of a complaint, the release is recorded as a final disposition. If an arrestee is referred to court for adjudication, the outcome (e.g., dismissal, diversion dismissal, acquittal, or conviction) is also recorded as a final disposition. "Intermediate" dispositions (e.g., placements into diversionary programs) are not included in the OBTS file.

ADULT FELONY ARREST DISPOSITIONS, 2002 ${ }^{\text {a }}$

[^10]
## DISPOSITIONS

HOW ARE OBTS DATA REPORTED?
Dispositions of adult felony arrests were reported by approximately 1,200 agencies in 2002. These agencies include law enforcement, prosecutors, and courts of the California criminal justice system.

OBTS data are taken directly from the Department of Justice's Automated Criminal History System (ACHS). The arrest dispositions received generally describe statewide processing of adult felony arrestees through California's criminal justice system. (See Appendix for data characteristics and known limitations.)

## DISPOSITIONS

## Conviction Rates

The conviction rates shown are calculated using two different bases. The first is based on total adult felony arrest dispositions and the second is based on total complaints filed. Each is valid and by presenting both, the reader is provided two perspectives from which to evaluate the effectiveness of the criminal justice system.

Conviction rates based on total adult felony arrest dispositions describe the overall processing of offenders by the criminal justice system. This method of calculation focuses on the proportion of convictions out of the total number of arrests.

(To Adult Corrections)

"The statistical measurement of crime in our society is one of the most difficult and most often misunderstood of law enforcement's activities. A major objective of criminal statistics is to provide a relief map of crime for law enforcement purposes. These studies must be viewed as a series rather than individually if the outlines which they attempt to describe are to become apparent... Each volume added to these series increases our knowledge of crime and greatly aids us in dealing with one of this nation's major domestic problems."

## Adult Corrections

## WHAT IS ADULT CORRECTIONS?

Adults convicted in California courts are frequently placed under the jurisdiction of either the state correctional system or a correctional system operated by local government. The state correctional system provides confinement, rehabilitation, and parole services through the California Department of Corrections (CDC) which includes the California Rehabilitation Center (CRC). The state correctional system also includes the California Youth Authority (CYA) and the California Department of Mental Health (CDMH). Local correctional agencies provide confinement, rehabilitation, and probation services for those sentenced to their care and also those persons awaiting trial or sentencing.

HOW ARE ADULTS UNDER SUPERVISION COUNTED?
At the state level, supervision data are obtained annually from the CDC and CYA. At the local level, supervision data are obtained from the Board of Corrections and county probation departments.

## WHAT IS A RATE?

A rate describes the number of events that occurred within a given population. The formula for calculating an adult correction rate can be found in the Appendix.

## HOW ARE EXPENDITURE AND PERSONNEL DATA REPORTED?

Expenditure data are obtained from the State of California Governor's Budget and the annual report of financial transactions concerning cities and counties in California. Both reports are provided by the Controller of the State of California.

Included in the criminal justice expenditures are salaries and employee benefits, services, and supplies. Capital outlay expenditures are excluded. Expenditures by the Department of Justice and regulatory agencies are also excluded.

Personnel data are obtained from the State of California Governor's Budget, the annual report of the Administrative Office of the Courts, and personnel surveys (one-day counts) conducted by staff of the Department of Justice. Personnel counts for the Department of Justice and other regulatory agencies are not included.

Note: Expenditure data for the last two years are not available from the Controller of the State of California in time for inclusion in this publication. Therefore, charts and narrative for expenditure data cover the three-year period, 1996/97 to 1999/00, only. Expenditure data obtained from the Governor's Budget (state agencies) are shown on Table 49 in the Data Section.

## Expenditures

Criminal justice expenditures are shown in both current and constant dollars.

## Comparing fiscal year 1996/97 to 1999/00:

■ There was a 15.9 percent increase in current-dollar expenditures and a6.8 percent increase in constant-dollar expenditures.

Note: The 2000/01 and 2001/02 criminal justice expenditure data were not available in time for inclusion in this publication.

Constant dollars are adjusted to reduce the effects of inflation. The State and Local Government Implicit Price Deflator, provided by the California Department of Finance, is used to make this adjustment. Fiscal year 1980/81 is used as the base year.

- Prosecution personnel decreased 32.1 percent.
- Public defense personnel increased 4.2 percent.
- Court personnel increased 3.7 percent.
- Corrections personnel increased 14.4 percent.

From 2001 to 2002:

- Total reported criminal justice full-time personnel decreased 0.3 percent.
- Law enforcement personnel increased 6.8 percent.
- Prosecution personnel decreased 41.8 percent.
- Public defense personnel increased 2.4 percent.
- Court personnel increased 0.4 percent.
- Corrections personnel decreased 1.2 percent.

> The decrease in prosecution personnel, 41.8 percent, is the result of an organizational shift. The passage of Assembly Bill 196 required that county-level child support programs, previously administered by district attorneys, be operated by local child support agencies.

## Personnel (continued)

In 2002, of 200,219 reported criminal justice fulltime personnel:

- Law enforcement personnel accounted for 57.7 percent $(115,552)$.
- Prosecution personnel accounted for 5.0 percent $(10,069)$.
- Public defense personnel accounted for 1.9 percent $(3,773)$.
- Court personnel accounted for 1.0 percent $(1,913)$.
- Corrections personnel accounted for 34.4 percent $(68,912)$.

"We all deserve a safe place to live, work, and play. That must be the goal of all those serving in the criminal justice system throughout our state. While I believe the "get tough on crime" policies of the past few years are a step in that direction, we must remember that the war on crime in California will never be over as long as there are victims of crime."

Daniel E. Lungren, Attorney General
"Crime and Delinquency in California, 1990"

## Citizens' Complaints Against Peace Officers

Section 13012 of the Penal Code states, "The annual report of the department provided for in Section 13010 shall contain statistics showing: . . . (e) The number of citizens complaints received by law enforcement agencies under Section 832.5. These statistics shall indicate the total number of these complaints, the number alleging criminal conduct of either a felony or misdemeanor, and the number sustained in each category. The report shall not contain a reference to any individual agency but shall be by gross numbers only . . . ."

Section 832.5(a) of the Penal Code requires that "Each department or agency in this state that employs peace officers shall establish a procedure to investigate complaints by members of the public against the personnel of such departments or agencies, and shall make a written description of the procedure available to the public."

Because of the nature of the requirements of Penal Code section 832.5, reporting definitions and procedures vary among individual reporting agencies. The data shown are accurate and complete to the extent that contributing agencies met their reporting obligations.

## Domestic Violence

Effective January 1, 1986, in compliance with Penal Code section 13730(a), law enforcement agencies began reporting monthly the number of domestic violence-related calls for assistance and indicating which cases involved the use of a weapon. This information is reported to the Attorney General.

Section 13730(b) of the Penal Code also instructs the Attorney General to report annually on the number of domestic violence-related calls received statewide, in each county, and by individual law enforcement agencies. Statewide data are reported here. County and agency-level data will be published in the Criminal Justice Profile, 2002 publication series.

Domestic violence is defined as ". . . abuse committed against an adult or a fully emancipated minor who is a spouse, former spouse, cohabitant, former cohabitant, or person with whom the suspect has had a child or is having or has had a dating or engagement relationship."[13700(b) PC]

Within this definition, abuse is further defined as ". . . intentionally or recklessly causing or attempting to cause bodily injury, or placing another person in reasonable apprehension of imminent serious bodily injury to himself or herself, or another." [13700(a) PC]

Notes: Dash indicates that data are not available.
Since 1952 there have been many changes in laws, data collection procedures, etc.; therefore, caution should be used when comparing data for the 1952-2002 time period.
Juvenile misdemeanor arrest data for 1973-2002 are not comparable to prior years due to changes in reporting criteria.
Population breakdowns by age are not available prior to 1960; therefore, populations at risk cannot be calculated for 1952-1959.
${ }^{\text {a }}$ Includes estimated annual data for the Bakersfield Police Department and the Oakland Police Department. For additional information see "Data Characteristics and Known Limitations" in the Appendix.
${ }^{1}$ Status offenses include truancy, incorrigibility, running away, and curfew violations. These offenses can only be committed or engaged in by a juvenile.
${ }^{2}$ Rates are based on annual population estimates provided by the Demographic Research Unit, California Department of Finance (see Table 56).
${ }^{3}$ Rates are based on the population at risk for each year. The categories are total (10-69 years of age), adult (18-69 years of age), and juvenile (10-17 years of age) (see Table 56 ).

aThe 2002 OBTS file was closed in May 2003 and is considered "preliminary"; the "final" file will be closed in Fall 2003.
${ }^{\text {b }}$ Convicted offense category and type of sentence data are not provided for 2002 due to procedural changes that allowed a large percentage of convictions (felony and misdemeanor)
to be incorrectly recorded as "all other offenses"; i.e., "violent," property," and "drug" offenses were under-recorded and "all other offenses" were over-recorded.
${ }^{1}$ The "state institutions" category includes sentences to death, prison, California Rehabilitation Center, and the Youth Authority.
${ }^{2}$ "Probation" includes straight probation, fine, and other (no sentence given, sentence suspended, and sentence stayed).

Notes: Dash indicates that data are not available.
Since 1952 there have been many changes in laws, data collection procedures, etc.; therefore, caution should be used when comparing data for the 1952-2002 period.
Beginning in 1960, rates are based on the adult population at risk (18-69 years of age) for each year (see Table 56). Comparable population data are not available prior to 1960.
${ }^{1}$ Jail population will differ from previously published data due to a change in source. For additional information, see "Data Characteristics and Known Limitations" in the Appendix.
${ }^{2}$ For 2001, complete data were not available for three counties. For additional information, see "Data Characteristics and Known Limitations" in the Appendix.
${ }^{3}$ For 2002, complete data were not available for two counties. For additional information, see "Data Characteristics and Known Limitations" in the Appendix.

[^28]Jail population data are provided by the California Board of Corrections (BOC).
Notes: Rates may not add to subtotals or total because of rounding.
By statute, interagency transfers between CDC, CYA, and Department of Mental Health (DMH) state hospitals may occur
CDC counts include felons housed in CRC and DMH state hospitals.
${ }^{2} 1996$ legislation has resulted in transfers of large numbers of adult inmates from CYA to CDC in 1997 through 2002
${ }^{3}$ CRC counts are for commitments to the Civil Narcotic Addict Program. Although CRC is a CDC institution, the CRC counts are not included in the CDC counts.
1996 legislation accounts for the decrease in this category from 1997 to 2002.
${ }^{5}$ Outpatients are civil narcotic addicts under parole supervision.
${ }^{6}$ Jail population will differ from previously published data due to a change in source. For additional information, see "Data Characteristics and Known Limitations" in the Appendix
${ }^{7}$ Average daily jail populations are for Type II, III, and IV facilities.
${ }^{8}$ Counts may not add to the total due to projections and rounding of numbers made by the BOC
${ }^{9}$ These rates are based on the adult population at risk (18-69 years of age) for each year (see Table 56),
${ }^{\text {a }}$ For 2001, complete data were not available for three counties. For additional information, see "Data Characteristics and Known Limitations" in the Appendix.
${ }^{\circ}$ For 2002, complete data were not available for two counties. For additional information, see "Data Characteristics and Known Limitations" in the Appendix.

Notes. Rates and percentages may not add to subtotals, total, or 100.0 because of rounding.
CRC counts are for commitments to the Civil Narcotics Addict Program. Although CRC is a CDC institution, the CRC counts are not included in the CDC counts.
${ }^{2}$ Counts are for commitments of adults from criminal courts.
${ }^{3}$ Persons sentenced to CDC and transferred to the custody of CYA under Welfare and Institutions Code 1731.5(c)
${ }^{4} 1996$ legislation accounts for the decrease in this category from 1997 to 2002.
${ }^{5}$ Adults returned from criminal court who had previous CYA commitments and/or who may have been under CYA jurisdiction at the time of the new commitment.
${ }^{6}$ These rates are based on the adult population at risk (18-69 years of age) for each year (see Table 56).

Notes: Law enforcement personnel counts do not include state police, UC Lawrence-Livermore Lab, or the Bay Area Rapid Transit for 1969-1971.
Additionally, state police and UC Lawrence-Livermore Lab did not report in 1972 and 1973.
Personnel in the Department of Justice and state regulatory agencies are not included.
Counts may not match previously published data due to changes in categories and/or file adjustments.
${ }^{1}$ The passage of Assembly Bill 196 required that county-level child support programs, previously administered by district attorneys, be operated by local child support agencies. This accounts for the large decrease in prosecution personnel from 2001 to 2002.

Sources: Law enforcement, district attorney, public defender, and probation personnel surveys (CJSC); Annual Report of the Administrative Office of the California Courts (California Judicial Council); and the State of California's Governor's Budget.
Notes: Personnel in the Department of Justice and state regulatory agencies are not included.
Counts may not match previously published data due to changes in categories and/or file adjustments.
${ }^{1}$ Law enforcement personnel counts are obtained from a one-day survey taken on October 31. All other personnel counts are taken on June 30. Department of Corrections and Youth Authority personnel are fiscal year counts obtained from the Governor's Budget
${ }^{2}$ Prosecution, public defense, and probation department survey forms have been revised; beginning in 1996, counts reflect all full-time personnel, regardless of funding.
${ }^{3}$ The passage of Assembly Bill 196 required that county-level child support programs, previously administered by district attorneys, be operated by local child support agencies.
This accounts for the large decrease in prosecution personnel from 2001 to 2002.
${ }^{4} 1999$ data includes private attorneys serving under contract as full-time public defenders.
${ }^{5}$ Due to court unifications, the counts for the superior, municipal, and justice courts have been combined
${ }^{6}$ Includes court commissioners and referees.

"As was admitted in the introduction, the purpose of this report was to convey some idea of the magnitude of the crime problem, and to present factual data on local and State procedures which are applied to persons alleged to have committed serious crimes... Reception of this report will very largely govern the publication and content of projected future issues which, as time goes on, can serve to indicate trends and variations in crime and in the administration of criminal justice in California."

## DATA CHARACTERISTICS AND KNOWN LIMITATIONS

## CRIMES

## Uniform Crime Reporting Program (UCR)

- Crime data from the UCR Program have been published continuously for 50 years and are available in a somewhat consistent format since 1952.
- The number of reported homicide, forcible rape, and aggravated assault crimes represents known victims, while for robbery, burglary, larceny-theft, motor vehicle theft, and arson, the number represents known incidents.
- If multiple crimes occur during the same event, only the most serious (based upon a hierarchy) is counted. Arson is the exception.

## ARRESTS <br> Monthly Arrest and Citation Register (MACR)

- Arrest data from the MACR reporting system date back to 1957. Prior to 1957, only adult felony arrest data were available.

■ If a person is arrested for multiple offenses, MACR selects only the most serious offense, based on the severity of possible punishment.

- Felony arrest counts may include some misdemeanor warrants for felony offenses.
- The subjectivity of the classification and labeling process must be considered in the analysis of race/ethnic group data.
- The Bakersfield Police Department was unable to provide arrest data for February through December 1995. The 1995 estimates for this agency were calculated by averaging the number of arrests reported for 1992, 1993, and 1994. The Oakland Police Department was unable to provide any arrest data for 1995. This department requested that the number of arrests reported by their agency for 1994 be reduced by five percent to create 1995 estimates. Estimates by both agencies were added to the 1995 statewide MACR master file count for trend tables.

## ADULT FELONY ARREST DISPOSITIONS

Offender-Based Transaction Statistics (OBTS)

- Disposition data from the OBTS system are available from 1975. The OBTS system, which began with a 25 percent sample in four counties in 1973, became operational on a statewide basis in 1975. All 58 counties were reporting by 1978.
- OBTS data are grouped by the year of disposition regardless of the year in which the arrest occurred.
- Adult Felony Arrest Disposition data represent final dispositions equal to approximately 65-75 percent of the total adult felony arrests made during a calendar year. Therefore, final dispositions may occur in a year following the year of arrest.
- The 1997 OBTS file was accessed in September 1998. The 1998 OBTS file was accessed in November 1999. The 1999 file was accessed in May 2001. The 2000 file was accessed in January 2002. The 2001 file was accessed in January 2003. The 2002 file was accessed in May 2003 and is considered preliminary.
- Caution should be used when comparing conviction and nonconviction dispositions since budget constraints necessitated the processing of conviction dispositions on a priority basis. The impact of this procedural change has yet to be determined.
- Only the final disposition of an arrest event is selected for statistical purposes. Intermediate dispositions (diversion programs, suspended proceedings, reopenings, retrials, or subsequent actions) are not included in OBTS data.
- If a person is arrested for multiple offenses, OBTS selects only the most serious offense, based on the severity of possible punishment. If there are multiple court dispositions, OBTS selects the most serious court disposition and the associated offense.
- OBTS data on state institutional commitments may vary from information compiled and reported by other state agencies because of differences in the data collection systems and criteria.
- The OBTS file includes some persons whose age at arrest was under 18. These minors received a final disposition in adult court under provisions of the Welfare and Institutions Code sections 602, 707(a), 707(b), 707(c), and 707.1(a).
- 2002 OBTS data for convictions by type of offense are not available due to a procedural change which allowed a large percentage of convictions to be incorrectly recorded as "all other offenses." This caused "violent," "property," and "drug" offenses to be under-recorded and "all other offenses" to be over-recorded.

## ADULT CORRECTIONS

- Adult corrections data are compiled from a number of sources and are complete from 1966. State supervision data are available from 1960, and state institutional data are available from 1952.
- The source for county and city jail data is now the California Board of Corrections (BOC), "Jail Profile Survey." Data will not match previously published data due to the change in data source.
- Counts may not add to the total due to projections and rounding of numbers made by the BOC.
- CJSC jail population counts in this publication are based on type II, III, and IV facilities only. Some juveniles may be included.
- Probation data include adults placed on supervised probation only. Court probation, diversion, and summary probation are not included.
- Persons are counted once for each jurisdiction. Therefore, data include original grants of probation and do not include subsequent grants of probation to persons already under probation supervision ordered by the same level court in the same county. Also, the probationers under jurisdiction of both superior and lower courts (or unified courts) and any who are jurisdictional cases of more than one county are counted more than one time in statewide totals.
- Labels were changed from Superior and Lower court to Felony and Misdemeanor offense because of court unification.
- For 2001, data submitted by San Bernardino County and Yolo County were missing three months of reporting due to data system problems. San Francisco County did not report data for 2001 due to data system problems.
- For 2002, data submitted by Marin County was missing two months of reporting due to data system problems. San Francisco County did not report data for 2002 due to data system problems.

## CRIMINAL JUSTICE EXPENDITURES AND PERSONNEL

- Expenditure data, as published in previous CJSC publications, are available from the 1967/68 fiscal year while personnel data are available from 1969.
- The UCR definition specifies that law enforcement agencies should only report personnel paid by funds designated for law enforcement.
- Expenditure data for 2000/2001 and 2001/2002 were not available from the Office of the State Controller in time for inclusion in this publication.
- The 1996 data collection survey forms were revised in an attempt to collect counts on the number of criminal justice personnel employed by prosecutors, public defenders, and probation departments, regardless of the funding source. Prior to 1996, counts excluded state- and federally-funded positions.

## CITIZENS' COMPLAINTS AGAINST PEACE OFFICERS

- Citizens' Complaints Against Peace Officers has been collected since 1981. Data are available in a statewide total only.
- Because of the nature of the requirements of Penal Code section 832.5, reporting definitions and procedures may vary among individual reporting agencies.

## DOMESTIC VIOLENCE

- Reporting of Domestic Violence-Related Calls for Assistance began in July 1986. The first full year of reporting was 1987.
- The definition of "domestic violence" is subject to varying interpretations by law enforcement agencies. As a result, different types of domestic relationships are included in the database.
- San Francisco Police Department did not report data from April 1997 to December 1999.
- Included in the data are any cases which resulted in a report being written by the responding law enforcement agencies. Data, therefore, include both cases where an arrest was made and those where circumstances did not warrant an arrest.
- In April 2002, law enforcement agencies were given clarification about reporting personal weapons. This corresponds to a notable decrease in the number of personal weapons reported.

## COMPUTATIONAL FORMULAS

## CRIMES

Crime rate - A crime rate describes the number of crimes reported to law enforcement agencies per 100,000 total population. A crime rate is calculated by dividing the number of reported crimes by the total population. The result is multiplied by 100,000. For example, in 2002 there were 64,805 robberies in California and the population was $35,301,000$. This equals a robbery crime rate of 183.6 per 100,000 general population.

$$
\frac{64,805}{35,301,000}=.001836 \times 100,000=183.6
$$

Clearance rate - A clearance rate describes the percentage of clearances reported to the number of crimes reported. A clearance rate is calculated by dividing the number of clearances by the number of crimes reported. The result is multiplied by 100. For example, in 2002 there were 1,362 clearances for homicide crimes and 2,392 homicides reported. This equals a homicide clearance rate of 56.9 percent.

$$
\frac{1,362}{2,392}=.56939 \times 100=56.9 \text { percent }
$$

## ARRESTS

Arrest rate - An arrest rate describes the number of arrests made by law enforcement agencies per 100,000 total population or per 100,000 population considered to be at risk for arrest. Regardless of the population used, both rates are calculated in the same manner. An arrest rate is calculated by dividing the number of reported arrests by the desired population. The result is multiplied by 100,000 . For example, in 2002 there were 487,364 total felony arrests. The total population was $35,301,000$ and the population at risk (10-69) was $27,302,433$.

$$
\begin{aligned}
& \frac{487,364}{35,301,000}=.013805 \times 100,000=1,380.6 \text { per } 100,000 \text { population } \\
& \frac{487,364}{27,302,433}=.017850 \times 100,000=1,785.1 \text { per } 100,000 \text { population at risk }
\end{aligned}
$$

## ADULT FELONY ARREST DISPOSITIONS

Conviction rate - A conviction rate describes the proportion of defendants convicted within a given population. Conviction rates are computed using two different bases: total dispositions and total complaints filed. Both are calculated in the same manner. The total number of convictions is divided by the desired population and multiplied by 100. For example, 171,540 adult felony arrests resulted in a conviction in 2002. There were 254,529 total felony arrest dispositions and 207,787 total complaints filed. The conviction rate for total felony arrest dispositions was 67.4 percent and for total complaints filed was 82.6 percent.

$$
\begin{aligned}
& \frac{171,540}{254,529}=.673951 \times 100=67.4 \text { percent of total felony arrest dispositions } \\
& \frac{171,540}{207,787}=.825557 \times 100=82.6 \text { percent of total complaints filed }
\end{aligned}
$$

## ADULTCORRECTIONS

Adult correction rate - An adult correction rate describes the number of adults under supervision per 100,000 adult at-risk population. An adult correction rate is calculated by dividing the number of adults under supervision by the adult population at risk (18-69). The result is multiplied by 100,000. For example, in 2002 there were 689,515 adults under state and local supervision and the adult population at risk was $22,927,383$. This equals an adult correction rate of $3,007.4$ per 100,000 population at risk.

$$
\frac{689,515}{22,927,383}=.0300738 \times 100,000=3,007.4
$$

## ADDITIONALINFORMATION

Percent change - A percent change describes the change in number or rate from one year to another. A percent change is calculated by subtracting the base year data from the current year data. The result is divided by the base year data and multiplied by 100. For example, in 2002 the robbery crime rate was 183.6. In 1997 the robbery crime rate was 247.0. The percent change in rate from 1997 to 2002 is a 25.7 percent decrease.

$$
\frac{183.6-247.0}{247.0}=-.256680 \times 100=-25.7 \text { percent }
$$

Populations at risk - The Arrest section of this report includes three comparison populations: total (10-69 years of age), adult (18-69 years of age), and juvenile (10-17 years of age).

When a series of rates are calculated using different populations, the rate calculated for the total will not be equal to the sum of the rates for the parts. For example, the arrest rate calculated using the total at-risk population will not equal the juvenile arrest rate (based on the juvenile at-risk population) plus the adult arrest rate (based on the adult at-risk population).

Also, the percent changes calculated for these at-risk rates cannot be added. This is because the percent change in the total arrest rate is the result of independent changes in both the number of arrests and the at-risk populations of adults and juveniles.

Crime in California presents statistics showing the amounts and types of offenses known to public authorities and the administrative actions taken by the criminal justice system. For 50 years, Crime in California has provided information on crimes and the criminal justice process. The collection and publication of these data are mandated by California Penal Code sections 13010-13012.

- Crime and arrest rates are calculated using annual population estimates provided by the Demographic Research Unit, California Department of Finance. Intercensal population data are revised after each decennial census. Upon receipt of the intercensal revisions, crime and arrest rates are recalculated.
- A number of factors can influence counts in particular jurisdictions. These factors should be considered when using crime statistics, especially for comparative purposes.

Variations in composition of the population, particularly age structure.
Population density and size of locality and its surrounding area.
Stability of population with respect to residents' mobility, commuting patterns, and transient factors.
Modes of transportation and highway system.
Economic conditions, including median income and job availability.
Cultural conditions, such as education, recreation, and religious characteristics.
Family conditions with respect to divorce and family cohesiveness.
Effective strength of law enforcement agencies.
Administrative and investigative emphases of law enforcement.
Policies of other components of the criminal justice system (i.e., prosecutorial, judicial, correctional, and probational).
Attitudes of citizenry toward crime.
Crime reporting practices of citizenry.
Illegal drug supply, cost, and demand.

- Historical data are included in this Crime in California report to provide long-term trend data. The time periods for which data are available vary from database to database depending upon the date each program was instituted. For additional information, see the Data Characteristics and Known Limitations on pages 162-163.
- Since 1952, there have been many changes in laws and data collection procedures. For instance, in 1986 legislation was enacted which required reporting domestic violence as criminal conduct. As a result, the aggravated assault rate increased over 35 percent in one year. These types of changes should be considered when comparing data.

Crime in California, 2002 is the result of the combined efforts of many dedicated people who do the work of processing agency reports, initiating computer runs, checking and re-checking numbers, and all the other work necessary to maintain a smooth operation. Our thanks to:

[^0]:    The California Department of Justice is contemplating the addition of theft (\$400 and over) and arson to the California Crime Index (CCI) beginning with Crime in California, 2003. Data for arson are available since 1980 and theft ( $\$ 400$ and over) data have been collected since 1983.

    These changes would result in a more representative presentation of crime in California as indicated by the California Crime Index. They would also bring California and FBI crime indexes more in alignment.

    These changes were planned to begin with Crime in California, 2002, but the necessary population data for prior years were not available. The population data will be available in time for inclusion in Crime in California, 2003.
