Introduction & Purpose

On September 2, 2016, pursuant to Title 11, California Code of Regulations, Section 999.5, subdivision (h), Hoag Memorial Hoag Presbyterian, a general acute care hospital with campuses located in Newport Beach, California and Irvine, California, submitted a request to modify Condition IV (b) set forth in the California Attorney General's "Conditions to Approval of Affiliation Agreement by and between Hoag Memorial Hospital Presbyterian, Covenant Health Network, Inc., St. Joseph Health System, Mission Hospital Regional Medical Center, St. Jude Hospital, St. Joseph Hospital of Orange, and St. Mary Medical Center." The California Attorney General's decision, dated February 8, 2013, requires Hoag Memorial Hospital Presbyterian to provide 31 licensed intensive care beds for five years under Condition IV (b) as set forth below:

IV.

For five years from the closing date of the Affiliation Agreement, Hoag Memorial Hospital Presbyterian shall be operated and maintained as two licensed general acute care hospitals (as defined in California Health and Safety Code Section 1250) and shall maintain and provide the following health care services:

- a) Twenty-four hour emergency medical services as currently licensed (minimum of 58 Emergency beds/stations at the Newport Beach Hospital and 14 Emergency beds/stations at the Irvine Hospital) with the same types and levels of services as currently provided¹;
- b) Intensive Care services as currently licensed (minimum of 31 beds at the Newport Beach Hospital and 12 beds at the Irvine Hospital) with the same types and levels of services as currently provided;
- c) Coronary Care services as currently licensed (minimum of 12 beds at the Newport Beach Hospital) with the same types and levels of services as currently provided;
- d) Obstetrical services as currently licensed (minimum of 70 beds at the Newport Beach Hospital) with the same types and levels of services as currently provided;
- e) Neonatal Intensive Care services as currently licensed (minimum of 21 beds at the Newport Beach Hospital) with the same types and levels of services as currently provided; and
- f) Chemical Dependency Recovery services as currently licensed (minimum of 21 beds at the Newport Beach Hospital) with the same types and levels of services as currently provided.

Hoag Memorial Hospital Presbyterian shall not place all or any portion of its above-listed licensed-bed capacity or services in voluntary suspension or surrender its license for any of these beds or services.

¹ The term "currently provided" means types and levels of services provided as of October 1, 2012.

Hoag Memorial Hospital Presbyterian's request to modify Condition IV(b) seeks a reduction of the number of required intensive care beds "so as to permit Hoag to de-license twelve (12) Intensive Care Unit (ICU) beds at its Newport Beach campus that are currently wholly unutilized and to use the space to add eighteen (18) acute rehabilitation beds (IRF) that are needed by the community²." Hoag Memorial Hospital Presbyterian will continue to operate the remaining 19 intensive care beds at the Newport Beach location, as well as the 12 licensed intensive care beds at the Irvine location.

Vizient, Inc. (Vizient) was retained to prepare this report for the Office of the California Attorney General to analyze Hoag Memorial Hospital Presbyterian's request to reduce the number of required intensive care beds as set forth in Condition IV (b). In preparation of this report, Vizient, Inc. performed the following:

- A review of Hoag Memorial Hospital Presbyterian's request to modify Condition IV (b) dated September 1, 2016 and submitted to the Office of the California Attorney General;
- An analysis of utilization and service information provided by the California Office of Statewide Health Planning and Development (OSHPD); and
- A review of service area trends to determine if similar charity care and payer mix patterns are occurring at other area hospitals.

² Hoag Memorial Hospital Presbyterian's Request for Modification of Condition of Consent is available in full on the California Attorney General's website at <https://oag.ca.gov/charities/nonprofitosp>.

Background & History

In 1940, George Hoag, Sr., his wife, Grace, and their son, George Hoag II, established the George Hoag Family Foundation. In 1950, they donated the funds to begin constructing Hoag Memorial Hospital Presbyterian, which opened in 1952. Today, Hoag Memorial Hospital Presbyterian has two hospital locations under one license, located at 1 Hoag Drive in Newport Beach and 16200 Sand Canyon Avenue in Irvine. The Newport Beach and Irvine locations are currently licensed for a total of 527 beds³. In 2010, Hoag Memorial Hospital Presbyterian opened the affiliated 70-bed Hoag Orthopedic Institute on a separate license.

In 2011 and 2012, board leadership and senior administration from St. Joseph Health System and Hoag Memorial Hospital Presbyterian engaged in discussions regarding the creation of a managed system of care in Southern California. On June 28, 2012, St. Joseph Health System and Hoag Memorial Hospital Presbyterian entered into a letter of intent to develop an integrated healthcare delivery system. On August 15, 2012, St. Joseph Health System and Hoag Memorial Hospital Presbyterian announced the proposed affiliation of Hoag Memorial Hospital Presbyterian, a California nonprofit public benefit corporation, St. Joseph Health System, a California nonprofit public benefit corporation, Mission Hospital Regional Medical Center, a California nonprofit public benefit corporation, St. Jude Hospital, a California nonprofit public benefit corporation, St. Joseph Hospital of Orange, a California nonprofit public benefit corporation, St. Mary Medical Center, a California nonprofit public benefit corporation, and Covenant Health Network, Inc., a California nonprofit public benefit corporation that was newly formed by Hoag Memorial Hospital Presbyterian and St. Joseph Health System as a regional holding company.

On October 22, 2012, Hoag Memorial Hospital Presbyterian submitted notice of the proposed affiliation and requested the California Attorney General's consent. MDS Consulting, now Vizient, was retained by the Office of the California Attorney General to prepare a healthcare impact statement to describe the possible effects that the proposed affiliation could have on the communities served by Hoag Memorial Hospital Presbyterian. On December 28, 2012, the healthcare impact statement was issued. On February 8, 2013, the California Attorney General issued her decision granting conditional consent to the proposed affiliation⁴. Hoag Memorial Hospital Presbyterian's fiscal year is from July 1 to June 30.

Today, Hoag Memorial Hospital Presbyterian provides a broad range of services, including oncology services, cardiology services, vascular services, women's health services, and emergency services, to the residents of Newport Beach, Irvine, and Orange County.

³ The hospital license is available in the Appendix of this report.

⁴ The Attorney General's Decision is available in full on the California Attorney General's website at <https://oag.ca.gov/charities/nonprofithosp>.

Service Area Definition

Based upon Hoag Memorial Hospital Presbyterian's 2014 inpatient discharges, its service area is comprised of 49 ZIP Codes from which 80% of its inpatient discharges originated. Approximately 31% of Hoag Memorial Hospital Presbyterian's discharges originated from the top five ZIP Codes that are located in Costa Mesa, Huntington Beach, and Newport Beach. In 2014, Hoag Memorial Hospital Presbyterian's market share in the service area was approximately 17% based on total area discharges.

HOAG MEMORIAL HOSPITAL PRESBYTERIAN PATIENT ORIGIN: 2014						
ZIP Codes	Community	Total Discharges	% of Discharges	Cumulative % of Discharges	Total Area Discharges	Market Share

Service Area Map

Hoag Memorial Hospital Presbyterian's service area includes approximately 1.6 million residents. There are 12 hospitals⁵ located within Hoag Memorial Hospital Presbyterian's service area and five additional hospitals located outside of the service area that are important providers of healthcare services to service area residents.

⁵ Of the 12 hospitals located in the service area, data for one of the hospitals, Hoag Orthopedic Institute, was excluded from the analysis because it does not have any licensed intensive care beds. Data for five hospitals located outside of the service area (Chapman Global Medical Center, Los Alamitos Medical Center, Garden Grove Hospital & Medical Center, St. Joseph Hospital – Orange, and UC Irvine Medical Center) was included in the analysis because these hospitals are important providers of healthcare services to service area residents.

Intensive Care Capacity: Market Analysis

Between FY 2011 and FY 2015, the number of intensive care beds at the 15 area hospitals close to Hoag Memorial Hospital Presbyterian decreased by approximately 3% from 392 intensive care beds to 380 intensive care beds. The number of patient days decreased by approximately 10%, resulting in an 8% decrease in occupancy to an overall rate of about 50%. This means that, on average, area hospitals had approximately 190 licensed beds that were vacant and available for additional intensive care patients.

In FY 2015, Hoag Memorial Hospital Presbyterian's 31 licensed intensive care beds comprised approximately 8% of the area's 380 intensive care beds and also ran at an average occupancy of only about 50% (a decrease of 8% since FY 2011). In FY 2015, 10 of the 15 area hospitals reported occupancy rates of less than 60%, indicating that there is availability and accessibility of intensive care services at area hospitals to serve additional intensive care patients.

INTENSIVE CARE UTILIZATION: FY 2011-2015

Source: OSHPD Annual Disclosure Reports, FY 2011-2015

¹ OSHPD Alerts Annual Utilization Reports, CY 2011-2015

² Mission Hospital Regional Medical Center & Mission Hospital Laguna Beach operate under one hospital license

Note: Discharges include discharges directly from the hospital and excludes intra-hospital transfers. According to OSHPD, an intra-hospital transfer is "an in-house discharge from one level of care to another level of care, usually from intensive care to medical/surgical acute care. The patient is moved to another care unit, but not discharged from the hospital. These are also called service discharges."

Intensive Care Capacity: Internal Analysis

Hoag Memorial Hospital Presbyterian's 31 licensed intensive care beds are divided into three units: 1 south (11 beds), 4 west (8 beds), and 3 west (12 beds). For the last two years, the 12 beds in 3 west have not been utilized, and all of Hoag Memorial Hospital Presbyterian's intensive care patients have been treated in the other two units (1 south and 4 west). Further, between FY 2011 and FY 2015, intensive care patient days at Hoag Memorial Hospital Presbyterian have decreased by approximately 8%, and the average length of stay⁶ and average daily census have decreased by 4% and 8%, respectively. Hoag Memorial Hospital Presbyterian's intensive care services are an important resource for supporting Hoag Memorial Hospital Presbyterians surgical services. However, inpatient surgeries at Hoag Memorial Hospital Presbyterian have decreased by nearly 30% over the five-year period, while outpatient surgeries have increased by nearly 24%.

Based on the current volume of discharges, patient days, and length of stay, a reduction from 31 licensed intensive care beds to 19 intensive care beds would result in an average occupancy of 81%. While the 19 intensive care beds would still provide sufficient capacity for intensive care patients at Hoag Memorial Hospital Presbyterian, it is likely that availability and accessibility of intensive care services would continue to increase as a result of a continued trend of declines in inpatient surgeries and patient days.

INTENSIVE CARE SERVICE VOLUMES: FY 2011-2015					
	2011	2012	2013	2014	2015
Licensed Beds	31	31	31	31	31
Patient Days	6,118	6,439	6,402	6,039	5,641
Discharges ¹	235	280	267	205	260
Average Length of Stay ²	2.6	2.5	2.5	2.6	2.5
Average Daily Census	17	18	18	17	15
Occupancy	54.1%	56.9%	56.6%	53.4%	49.9%
Inpatient Surgeries	7,921	5,862	6,111	4,432	5,630
Outpatient Surgeries	5,401	7,027	7,139	5,204	6,692

Sources: OSHPD Alirits Annual Utilization Reports, 2011-2015 & OSHPD Disclosure Reports, 2011-2015

¹ Discharges include discharges directly from the hospital and excludes intra-hospital transfers. According to OSHPD, an intra-hospital transfer is "an in-house discharge from one level of care to another level of care, usually from intensive care to medical/surgical acute care. The patient is moved to another care unit, but not discharged from the hospital. These are also called service discharges."

² Average length of stay is calculated using both direct hospital discharges and intra-hospital transfers

⁶ According to the Society of Critical Care Medicine, "Intensive care unit (ICU) length of stay (LOS) has been estimated at 3.8 days in the United States. However, it varies depending on patient and ICU attributes."

Intensive Care Utilization Projections

Between 2013 and 2015, intensive care patient days per 1,000 decreased slightly in Orange County from 41.0 to 40.7, slightly above the State of California average of 39.3 in 2015. In Hoag Memorial Hospital Presbyterian's service area⁷, intensive care patient days per 1,000 have decreased by approximately 10% from 46.4 in 2013 to 41.6 in 2015. The intensive care patient days per 1,000 and the intensive care inpatient admissions per 1,000 are similar in both Orange County and Hoag Memorial Hospital Presbyterian's service area and slightly higher than the State of California averages.

Intensive Care Utilization	State of California			Orange County			Service Area		
	2013	2014	2015	2013	2014	2015	2013	2014	2015
Population Estimates	38,120,064	38,408,766	38,697,469	3,091,540	3,118,643	3,145,745	1,571,519	1,586,645	1,601,772
Patient Days per 1,000 People	39.0	38.9	39.3	41.0	38.8	40.7	46.4	41.3	41.6
Inpatient Admissions per 1,000 People	2.8	2.9	2.9	3.4	3.0	3.3	3.4	3.1	3.3
Total Patient Days	1,485,708	1,494,455	1,519,292	126,764	120,980	128,098	72,984	65,568	66,644

Source: OSHPD Hospital Annual Utilization Data, 2013-2015

The population in Hoag Memorial Hospital Presbyterian's service area currently utilizes approximately 66,600 patient days of intensive care. This represents an average daily census of 183 patients. Because hospitals have daily and seasonal variations in demand and the population will continue to grow, hospitals often plan intensive care units based upon an average occupancy of 75%⁸. Utilizing this percentage means that 243 licensed beds are currently needed for the average daily census of 183 intensive care patients. By 2021, with population growth and based on current use rates, the service area would only utilize 15 more beds, indicating that there is no projected future need to add additional intensive care beds. If there was a reduction from 31 licensed intensive care beds to 19 intensive care beds at Hoag Memorial Hospital Presbyterian, area hospitals would provide 368 (380-12=368) licensed beds that would be available for current bed needs (183 beds) and future capacity (193 beds). Even if current bed needs and future bed needs were projected based upon 75% occupancy (243 beds and 258 beds, respectively), there would still be significant excess capacity.

Year	Population (1,000s)	Patient Days	Patient Days Per 1,000	Average Daily Census	Beds Needed (Based Upon 75% Occupancy)
2015	1601.8	66,644	41.6	183	243
2021	1697.2	70,604	41.6	193	258

Source: OSHPD Financial Pivot Tables & Alerts Annual Utilization Reports

Note: 2021 patient days and census data based on 2015 use rates

⁷ For the purpose of analyzing service area bed needs and intensive care utilization rates, hospitals located within Hoag Memorial Hospital Presbyterian's service area and those located nearby the service area that provide a large percentage of services to the service area residents were analyzed (total of 13 hospitals).

⁸ According to the Australian College of Critical Care Nurses and published by the US National Library of Medicine, National Institutes on Health, "optimal ICU occupancy rates are around 70-75%." Additionally, according to *Intensive Care Medicine*, "only 75% of the [intensive care] beds will be occupied if the occupancy rate is calculated on an hourly basis. This will allow the unit to cope with major emergencies and to avoid premature discharges."

Summary

An analysis of area hospitals shows 380 licensed intensive care beds, and nearly 70,000 intensive care patient days, resulting in an average daily census of 183 patients and an occupancy rate of nearly 50%. Due to the large number of available intensive care beds, and corresponding low occupancy rates, a decrease of 12 intensive care beds at Hoag Memorial Hospital Presbyterian would have a minimal effect on the overall needs for intensive care beds in the service area.

Vizient also studied the impact of population growth, and corresponding use rates, on future intensive care bed demand. When utilizing current use rates, and multiplying the use rates by the future service area population, Vizient projects the service area will only have a minimal additional demand for up to 15 intensive care beds, far fewer than the intensive care beds currently available.

Without the 12 licensed intensive care beds, Hoag Memorial Hospital Presbyterian's intensive care occupancy rate would increase from approximately 50% (based on 31 licensed intensive care beds) to 81% (based on 19 licensed intensive care beds). While this is slightly higher than the industry planning guideline of 75% occupancy for intensive care beds, it is also likely that future declines in inpatient surgeries and patient days will reduce the occupancy percentage. Vizient concludes that 19 licensed beds at Hoag Memorial Hospital Presbyterian will provide sufficient availability and accessibility for intensive care patients.

Vizient's analysis concludes that if the California Attorney General approves Hoag Memorial Hospital Presbyterian's request for a reduction of the 12 licensed intensive care beds, there will be minimal to no impact on the availability and accessibility of intensive care healthcare services in the service area or at Hoag Memorial Hospital Presbyterian.
