<p><i>Subject:</i></p> <p>AUTOMATED FIREARMS SYSTEM (AFS) 2010/2011 PHASE II - ENHANCEMENTS</p>	<p><i>No:</i> 2011-BOF-01</p>	<p><i>Bureau of Firearms</i></p>
<p><i>Date:</i> 04-15-11</p>		

TO: ALL CLETS USERS, ALL AGENCY CLETS COORDINATORS

This bulletin provides an update to the Automated Firearms System (AFS) phase I enhancements identified in Information Bulletin 2010-BOF-01 and announces AFS phase II enhancements. These enhancements have been made to increase the efficiency and effectiveness of AFS inquiry responses, and special search capabilities. The enhancements also add new optional data fields to fully support crime gun tracing.

To implement the AFS enhancements, many local agencies will need to make California Law Enforcement Telecommunications System (CLETS) programming changes at the computer system server level (e.g. MSC, CAD, LAN/WAN). Users accessing AFS through the California DOJ Law Enforcement Agency Intranet Website (LEAWEB) will be subject to various screen changes related to the enhancements, but will not require programming changes.

NCIC CODE MANUAL – UPDATE

In addition, new National Crime Information Center (NCIC) gun make codes (see **Attachment A**) are effective immediately and should be noted in your NCIC Code Manual. Updates are also available via the Internet on the Law Enforcement Online (LEO) at www.leo.gov/lesig/cjis/cjis_pub/programs/ncictous.html. Users with questions concerning access to the LEO should contact the LEO Program Office at (888) 334-4536 or via e-mail at leoprogramoffice@leo.gov.

PHASE I ENHANCEMENTS – FORMAT REVISION AND UPDATES

1.1 – Crime Gun Data Fields – Format Revision

Following phase I of the AFS enhancements, it was determined that the sample format sequence and freeform transaction attached to Information Bulletin 2010-BOF-01 contained a formatting flaw. Accordingly, **Attachment B** contains a revised entry format sequence, an example of freeform transaction, and AFS message responses for a dual-entry Evidence and Crime Gun transaction.

1.2 – Message Key (QGK)

Previously, when the QGK message key was used to inquire by serial number, NCIC and only AFS Law Enforcement record types were searched. The message key has been enhanced and will now search NCIC and both historical and law enforcement AFS record types. When inquiring by serial number, additional information (such as the Make, Caliber, and Type) may optionally be included with the search. Inquiries by “NAM” will only search AFS historical record type entries and are not forwarded to NCIC.

1.3 – Pawn, Buy, and Consignment Transactions

On June 17, 2010, BOF disseminated Information Bulletin 2010-BOF-03 notifying all California law enforcement agencies of the new electronic reporting system for secondhand dealers and pawnbrokers to report firearms purchased, taken in trade, taken in pawn, accepted for sale on consignment, or accepted for auctioning. As noted in the information bulletin, California LEAs no longer have the ability to enter buy, pawn, or consignment entries into AFS from JUS 123 reports.

PHASE II ENHANCEMENTS – EFFECTIVE DECEMBER 29, 2010

2.1 – Zip Code Validation and New Data Field (ST) to Display State

To assist in expediting crime gun tracing, all AFS entries that contain a zip code are now validated against the US Postal Service (USPS) zip code table. In addition, the new state (ST) data field will display the two character USPS state abbreviation in the AFS response when a valid zip code is entered. The zip code table is updated monthly in AFS.

2.2 – New Dealer and Seller Information Displayed in AFS Response Messages

To provide comprehensive records of sold firearms, new data fields have been established to incorporate and display dealer and seller information in new AFS historical record type entries. Specifically, new dealer information displayed in the AFS response will include business name, dealer ID number (unique five-digit code assigned by BOF), address, city, zip code, county code, and phone number. New seller information displayed in the AFS response will include name, date of birth, address, city, zip code, county code, and either a CDL/ID number or military ID number. This information applies to the following AFS Historical record types: DROS, Pawn, Pawn Redemption, Buy, and Consignment. **Attachment C** identifies a listing of the new data fields and examples of AFS message responses.

2.3 – New Data Field – Gun Color (COL)

Previously, gun color was noted in the “MIS” field in AFS. A new data field Gun Color (COL) has been created to capture gun color in AFS entries. This new optional field will capture gun color data from the date of implementation forward. See **Attachment D** for a listing of the gun color codes and a description of each.

2.4 – Changes to Type of Firearm (TYP) and Category (CAT) Data Fields

As noted in Information Bulletins 2004-FD-03 and 2010-BOF-01, two data fields were modified to comply with NCIC Type and Category Codes. Changes were made to expand the Type of Firearm (TYP) data field from one to two characters and to eliminate the Category (CAT) data field. Accordingly, the TYP field is now a mandatory two-character field and the CAT data field is no longer in use.

PHASE II ENHANCEMENTS – EFFECTIVE FEBRUARY 25, 2011

2.5 – New Serial Number Inquiry Message Key (QGG)

A new message key (QGG) has been established to designate a unique hit number for each matching serial number included in the response. When using the QGG message key to search by a serial number, the responses are grouped by firearm Make (MAK), Caliber (CAL), and Type (TYP) for each matching serial number hit. Responses are displayed in descending chronological order based on the Date of Transaction (DOT). The number of records to be displayed (up to 100) must be determined by the LEA at the computer system server level (e.g., MSC, CAD, LAN/WAN) or when submitting an inquiry in a freeform transaction. The existing serial number inquiry message keys (QGB, QG, QGH, QGK, QGM) will remain available and

unchanged. See **Attachment E** for the entry format sequence, an example of freeform transaction, and an example of an AFS message response for an inquiry transaction.

2.6 – New Name/ID Number Inquiry Message Key (QGC)

A new message key (QGC) has been established for inquiries on an individual's name and date of birth or by ID number (e.g., CDL) to identify firearms currently recorded as owned or associated with the individual. Previously, when searching by an individual's name, AFS would display the entire firearms ownership history for the name searched. A secondary search by serial number was then necessary to establish current ownership of the firearm record(s) displayed. The new message key filters the response information to only display records of firearms that are currently recorded as owned by or registered to the individual. The number of records to be displayed (up to 100) must be determined by the LEA at the computer system server level (e.g., MSC, CAD, LAN/WAN) or when submitting an inquiry in a freeform transaction. The existing name inquiry message keys (QGH, QGK, QGM) will remain available and unchanged. Below are examples of the format sequence and freeform transaction for the QGC message key.

1. NAME AND DOB FORMAT:

QGC. ORI . NAME . DOB . HIT

IG

QGC. CA0349425 . NAM / RECORD , TEST . DOB / 01011943 . HIT / 100

2. ID NUMBER FORMAT:

QGC. ORI . IDN . HIT

IG

QGC. CA0349425 . IDN / X1234567 . HIT / 100

2.7 – New Law Enforcement Gun Release (LEGR) Document Code

Previously, DOJ processed LEGR applications and displayed applicant name and date of birth in AFS responses using the Operation of Law document code. A new AFS document code has been established to display approved LEGR applications in AFS. This new document code is a law enforcement record type used solely by DOJ and **does not constitute firearm ownership**. The new LEGR record will not display the name of the individual who submitted the LEGR application and will programmatically purge one day after the expiration date. In addition, the LEGR expiration date and the Originating Agency Case (OCA) number will be noted on the DOJ LEGR response letter to the applicant. LEAs can use this information to verify authenticity of the LEGR response letter. Below is an example of an AFS message response for a LEGR transaction.

* LEGR APPLICATION

PHASE II ENHANCEMENTS BEING DEPLOYED IN THE NEAR FUTURE

3.1 – New Updated And Revised AFS User Manual

Section 4 of the CJIS Manual, also known as The AFS Terminal Operator's Guide, will be revised to include information and instructions on all modifications and enhancements made to AFS since the last CJIS Manual revision. The revised AFS Terminal Operator's Guide will soon be available on the California Law Enforcement Website (CLEW).

3.2 – Display Full Transaction Upon Entry

AFS will display the full AFS entry data for successful transactions to the user upon submission in place of displaying only the File Control Number (FCN).

3.3 – Historical Gun Color (COL) Data

AFS data field COL will be enhanced to capture gun color in DROS and Pawn Redemption Historical record type entries dating back to January 1996.

3.4 – Historical Dealer Information Displayed

AFS will be enhanced to display dealer name and ID number in DROS and Pawn Redemption Historical record type entries dating back to January 1996.

3.5 – Display Name of Law Enforcement Agency

AFS will soon display the name of the LEA or court in AFS Law Enforcement record type entries. The LEA name will be displayed next to the Original Agency Number (ORI).

If you have questions related to information in this bulletin or you would like to request training on AFS, please contact the BOF Training Information and Compliance Section at (916) 263-4887.

Sincerely,

STEPHEN J. LINDLEY, Acting Chief
Bureau of Firearms

For KAMALA D. HARRIS
Attorney General
