

# BACK ON TRACK

LOS ANGELES

BOT-LA, a pilot program designed to reduce recidivism and provide an ex-offender with resources and skills for successful reentry, was launched March 2015. The evidence-based program addresses the repeat offender—those with the highest risk to recidivate. The following data is a first look at those participating in the program.

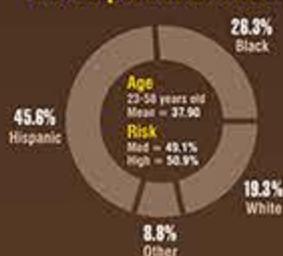

## DR<sup>3</sup>

The following report includes data reported through May 31, 2016.

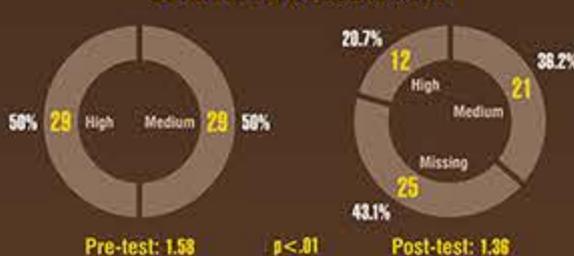

### Participants

Since its launch, 57 participants between the ages of 23 and 58 and, all medium-to-high risk to recidivate, have completed the BOT-LA program. A decrease in recidivism risk level has been observed for participants that have taken both a pre-test and post-test COMPAS<sup>®</sup> risk assessment. Of the participants, 45.6% are Hispanic, 26.3% are Black and 19.3% are White.

#### Participant Information

#### COMPAS Risk Assessment

\*a validated risk-needs tool used to assess individuals' risk to recidivate and common criminogenic needs.

### Criminal History

The participants have been arrested an average of 20 times, spanning from 1 to 64 arrests. The convictions from these arrests range from 1 to 31 with an overall average conviction rate of 10. Drug crimes represent the largest offense category for both arrests and convictions.

#### Arrests

Drug Crimes: 0-27 Mean=8.70  
 Person Crimes: 0-8 Mean=1.46  
 Property Crimes: 0-20 Mean=5.11  
 Total Crimes: 1-64 Mean=19.75

#### Convictions

Drug Crimes: 0-12 Mean=3.67  
 Person Crimes: 0-3 Mean=0.18  
 Property Crimes: 0-7 Mean=1.61  
 Total Crimes: 1-31 Mean=10.16

### Cognitive Behavioral Training

Cognitive Behavior Training (CBT) is an evidence-based intervention that helps offenders change pro-criminal, destructive thoughts, beliefs and values that underlie criminal thinking. As part of the core BOT-LA programming, all participants must complete the 26-week Thinking for a Change curriculum. The Aggression Replacement Training and the Cognitive Behavior Intervention for Substance Abuse curricula are completed on an as needed basis. The following data reports differences between pre-test (prior to program entry) and post-test (prior to release from custody) scores.

#### Course Completers

#### TCU Drug Screener V\*

Scores indicate a reduction in BOT-LA participant substance abuse disorder.

\*Scores reported are based on classification changes, not changes in raw scores

#### TCU Criminal Thinking Scale

Possible scores can range from 10 to 50 with higher scores indicating the participant engages in more criminal thinking.

**Criminal Rationalization\*\***  
\*\*statistically significant at the p<.05 level

**Personal Irresponsibility\*\*\***  
\*\*\*trends towards statistically significant at the p<.05 level; p=.07

### In-Custody Activities

#### Education

Empirical evidence shows that the less education an offender has attained, the more likely he or she is to recidivate. A meta-analysis by the RAND Corporation found that participation in educational offerings while in custody—including high school, college courses, and career-technical education—reduces recidivism. BOT-LA has followed the RAND research recommendations and provided high school, college, and career-technical course opportunities.

- High School Diplomas = 14
- Career Technical Education Certificates
  - Welding I (9); Welding II (6); Welding III (6)
  - Construction (13)
  - Painting I (10); Painting II (7)
- Transferrable College Credits Earned = 72
- Academic College Courses Completed = 18

#### Reentry Planning

Participants engage in additional program components to ensure foundational life skills, employment readiness, and to address reentry barriers prior to release from incarceration. Participants meet with a dedicated case manager who documents their needs and tracks progress toward reducing those needs. Participants attend life skills seminar offerings, employment readiness sessions, and reentry coordination meetings.

- Reentry Planning Sessions = 8
- Participants Per Case Manager = 27 to 1
- Housing Placement = 15
  - 7 Transitional Housing/Sober Living
  - 8 Residential Substance Abuse Treatment
- Tattoo Removal = 20 Served
- Identification Cards Issued = 15
- Birth Certificates Issued = 29
- Reentry Kits Issued = 42
- Return Destination
  - Transitional Housing/Residential Substance Abuse Treatment Facility = 15
  - Stay with Family and Friends = 5
  - Home = 5
  - Unknown = 18
- Participants That Completed The Life Skills Course = 52
- Resume Building = 52

### Recidivism

Although the BOT-LA pilot has been in operation for just over a year, 46 of the 57 participants who have completed the program have been released into the community. Of the 46 participants released, eight have been rearrested—resulting in a 17.39% rearrest rate. The Attorney General is committed to producing a rigorous outcome evaluation of BOT-LA. Work is underway to establish a control group to further evaluate the success of the BOT-LA reentry program.

#### Rearrest Rate
